Our website host requires passwords to be in a specific format.

They must have a minimum of 12 characters, contain at least one capital letter and one lower case letter. In addition there must be at least one digit and at least one special character. The special character list is quite restrictive. They only recognise: # ? ! @ $ % ^ & * -

One member suggests using a favourite address from your past that no one else is likely to guess. So Tony Hancock might use **23RailwayCuttings?** That caters for the character and digit list. All you then need is to remember a special character to add into the mix.

Usual advice applies. Do not write it down, do not share and change regularly.
